

# 1- and 2-Channel PicoGuard® AC Signal ESD Protector

# CM1214A

### Features

- Single channel ESD protection for an AC signal up to ±5V for 0.25W transmit power
- Connects two channels in series for signals up to ±10V (1W transmit power)
- ±8kV ESD protection per IEC 61000-4-2 contact discharge
- Sub-1pF loading capacitance
- Minimal variation with voltage and temperature
- Each I/O pin can withstand over 1000 ESD
- strikes\*
- SOT23-3 and MSOP-8 packages
- RoHS-compliant, lead-free finishing

### **Applications**

- RF switch and amplifier protection
- RF modules and RF IC protection
- Wireless handsets and WLAN
- High-speed AC signals for Gbit ethernet, etc.

### **Product Description**

The CM1214A *PicoGuard®* ESD protector is used to protect bipolar signal lines against electrostatic discharge (ESD). The CM1214A allows operation in high-speed environments with signals levels up to  $\pm 5V$ .

The CM1214A comes in two versions:

- The CM1214A-01SO is a single channel ESD protector and is available in a 3-lead SOT23-3 package.
- The CM1214A-02MR is a dual channel ESD protector and is available in an 8-lead MSOP-8 package.

The low sub-1pF loading capacitance makes the CM1214A-01SO ideal for protecting high-speed interfaces including RF switches and amplifiers.

The CM1214A-02MR is ideal for dual high-speed signal pairs used in Gigabit Ethernet, ADSL, etc. The CM1214A-02MR can also be used for higher transmit voltage applications by connecting the two channels in series.

Both devices come in RoHS-compliant, lead-free finishing.

### **Performance Information**

#### Typical Capacitance Characteristics vs. Voltage

CM1214A illustrates how the loading capacitance remains mainly flat across the voltage range from 0V to 5V, the voltage between CH pins.

Capacitance vs. Voltage (measured at 1MHz)

#### Figure 1. CM1214A Capacitance vs. Voltage

#### Typical Voltage Current (VI) Characteristics (low current)

CM1214A shows how the CM1214A experiences a symmetrical I/V curve, without any snapback or trigger voltage. It gradually starts to turn on at about 6V and clamps about 7V.

Figure 2. CM1214A VI Characteristics, Low Current

#### Typical Voltage-Current (VI) Characteristics (high current, pulse condition)

CM1214A shows how the CM1214A experiences a symmetrical I/V curve, without any snapback or trigger voltage. The curve shows only one polarity.

### **Application Information**

#### CM1214A-01SO

The CM1214A-01SO protects a single bipolar signal line often found in RF circuits. One I/O pin (pin 1 for example) is connected to the signal line for protection, and the other I/O pin is tied to GND. It is important to have a solid ground connection to reduce the clamping voltage. *Pin 3 of the 3-lead SOT23 must be left open (and not connected on the PCB)*.

#### CM1214A-02MR

The CM1214A-02MR protects two bipolar lines, such as for Gbit Ethernet. The PCB traces underneath the package connect across to the corresponding pins (Pins 1, 4, 6 and 7). *Pins 2, 3, 5 and 8 of the MSOP-8 package must be left open (and not connected on the PCB).* 

Any disturbance on the line above or below the standoff voltage is clamped.

### Application Information (cont'd)

Keep the ESD devices on the PHY side of the galvanic isolation and inside the  $V_{\rm CC}$  domain of the PHY controller.
