Advance Information

**Bi-CMOS IC** 

# **Dual-Output DC-DC Converter** for LCD Panel

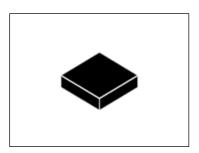

http://onsemi.com

#### Overview

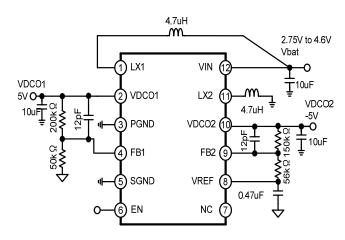

The LV52117 is a high current dual-output DC-DC converter which can generate both a positive and a negative voltage. The LV52117 is particularly suitable for powering applications such as LCD display.

#### **Function**

- Integrated 1.5MHz Synchronous Boost and Inverter Converters
- 2.75V to 4.6V Input Voltage Range
- 4.6V to 5.8V Adjustable Positive Output (VDCO1)
- -5.8V to -4.6V Adjustable Negative Output (VDCO2)
- Output Current Up to 100mA
- Pulse Skipping Mode in Low Load Condition
- Over Current/Short Circuit Protection

TDFN12 3.0x3.0x0.75mm 0.45mm pitch

Typical Applications (Tentative)

This document contains information on a new product. Specifications and information herein are subject to change without notice.

#### ORDERING INFORMATION

See detailed ordering and shipping information on page 10 of this data sheet.

#### **Specifications**

**Absolute Maximum Ratings** at Ta = 25°C

| Parameter              | Symbol   | Conditions                    | Ratings      | Unit |
|------------------------|----------|-------------------------------|--------------|------|
| Maximum supply voltage | VINmax   | VIN to GNDs                   | -0.3 to +5.5 | V    |
| Maximum Pin voltage1   | Vpin1max | LX1 to GNDs                   | -0.3 to +7.0 | V    |
| Maximum Pin voltage2   | Vpin2max | LX2 to GNDs                   | -8.0 to +5.5 | V    |
| Maximum Pin voltage3   | Vpin3max | VDCO1 to GNDs                 | -0.3 to +7.0 | V    |
| Maximum Pin voltage4   | Vpin4max | VDCO2 to GNDs                 | -7.0 to +0.3 | V    |
| Maximum Pin voltage5   | Vpin5max | LX2 to VDCO2                  | +12.5        | V    |
| Maximum Pin voltage6   | Vpin6max | VDCO1 to VDCO2                | +12.5        | V    |
| Maximum Pin voltage7   | Vpin7max | VIN to LX2                    | +12.5        | V    |
| Maximum Pin voltage8   | Vpin8max | EN to GNDs                    | -0.3 to +5.5 | V    |
| Maximum Pin voltage9   | Vpin9max | Other pin to GNDs             | -0.3 to +4.5 | V    |
| Allowable power        | Pdmax    | Ta=25°C The specified board*1 | 0.959        | mW   |
| Operating temperature  | Topr     |                               | -30 to +85   | °C   |
| Storage temperature    | Tstg     |                               | -40 to +125  | °C   |

<sup>\*1</sup> Mounted on a specified board: 50mm×70mm×1.2mm (Double-layer glass epoxy)

Caution 1) Absolute maximum ratings represent the values which cannot be exceeded for any length of time.

Caution 2) Even when the device is used within the range of absolute maximum ratings, as a result of continuous usage under high temperature, high current, high voltage, or drastic temperature change, the reliability of the IC may be degraded. Please contact us for the further details

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

#### **Recommended Operating Conditions** at Ta = 25°C

| Parameter            | Symbol | Conditions | Ratings       | Unit |
|----------------------|--------|------------|---------------|------|
| Supply voltage range | VINop  | VIN        | +2.75 to +4.6 | V    |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

#### **Electrical Characteristics** at Ta = 25°C, VIN=3.7V, VDCO1=5.0V VDCO2=-5.0V(Unless otherwise noted)

| Parameter                   | Symbol    | Conditions             |       | Ratings |       |      |

|-------|------------|--|--|
| Pin # | Pin name   |  |  |
| 1     | LX1        | Boost converter switching pin                            |  |
| 2     | VDCO1      | Boost converter output voltage                           |  |
| 3     | PGND       | Power ground   |  |
| 4     | FB1        | Feedback pin of Boost converter.                         |  |
| 5     | SGND       | Signal ground  |  |
| 6     | EN         | Chip enable (Active high) (*1)                           |  |
| 7     | NC         | No Connection  |  |
| 8     | VREF       | Voltage reference output for Inverting converter         |  |
| 9     | FB2        | Feedback pin of Inverting converter.                     |  |
| 10    | VDCO2      | Inverting converter output voltage                       |  |
| 11    | LX2        | Inverting converter switching pin                        |  |
| 12    | VIN        | Input supply voltage                                     |  |
|       | Expose-pad | Internally No Connection                                 |  |
|       |            | This pin must be connected to GND layers or VDCO2 layers |  |

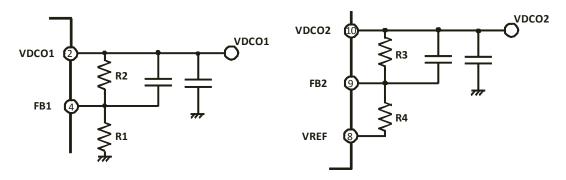

<sup>\*1</sup> DO NOT connect 6pin (EN) and 12pin (VIN) in the same line.

#### **VDCO Output voltage setting**

Output voltage is set by external resistor.

VDCO1: Two external resistor that it connected between VDCO1 and GND. VDCO2: Two external resistor that it connected between VDCO2 and VREF.

\*FB1=1.0V(Typ), FB2=0.6V(Typ), VREF=2.70V(Typ)

$$VDCO1 = \frac{R1 + R2}{R1} \cdot VFB1$$

$$VDCO2 = -\frac{R3}{R4} \cdot VREF + \frac{R3 + R4}{R4} \cdot VFB2$$

#### Starting & Shutdown flow

< Starting flow >

- 1. Apply battery voltage to 12pin (VIN) and L1(LX1 coil).
- 2. Apply high voltage to 6pin (EN).

< Shutdown flow >

- 1. Apply low voltage to 6pin (EN).
- 2. Drop supply voltage of the battery for 12pin (VIN) and L1(LX1 coil).

\*DO NOT connect 6pin (EN) and 12pin (VIN) in the same line.

#### Pulse skipping mode in low load condition

When DCM is detected automatically, converter is driven in skipping mode.

The skipping mode reduces power consumption by performing intermittent switching and contributes to the improving the efficiency in the low load condition.

\*DCM: Dis-continuous Current Mode

#### **Over Current Protection and Short Circuite Protection**

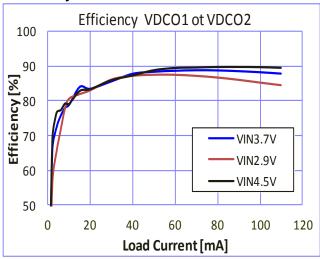

When a heavy load to exceed a rule appears, current is limited by protection system. If this limiter continues more than 50ms, it is judged to have short-circuited and converter is stoped.

#### **Thermal Shutdown**

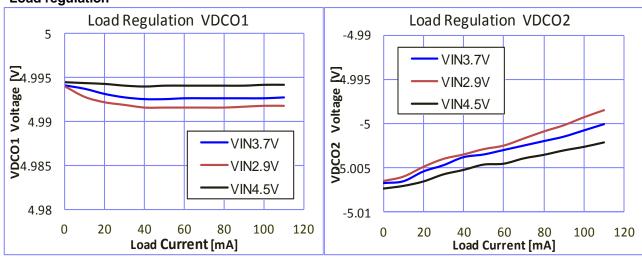

When chip temperayure is too high, boost converter and inverter converter is stopped.

#### Typical Characteristics (VIN:3,7V, VDCO1:5V, VDCO2:-5V, L=4.7 $\mu$ F)

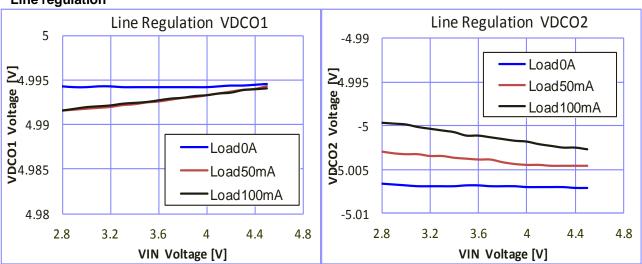

#### **Efficiency vs Load Current**

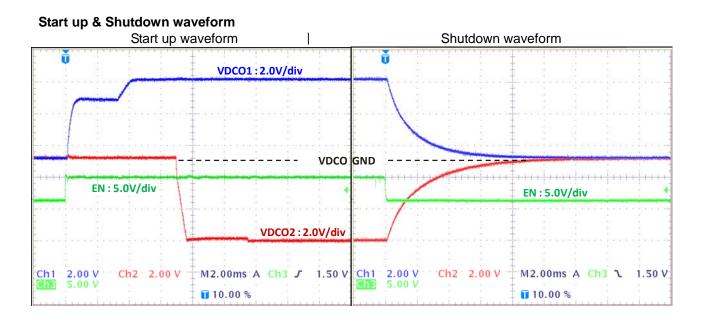

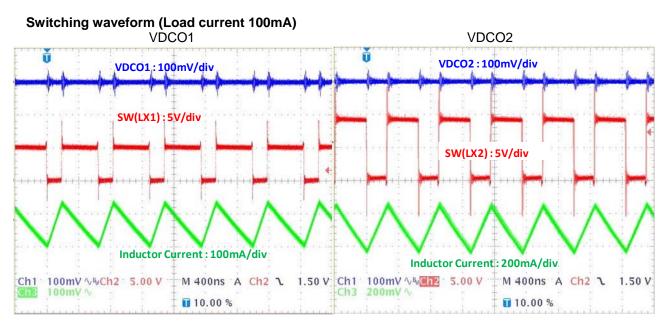

#### Load regulation

#### Line regulation
