

# LDO Regulator, 100 mA, 18 V, 1 $\mu$ A $I_Q$ , with PG

## NCV8711

The NCV8711 device is based on unique combination of features – very low quiescent current, fast transient response and high input and output voltage ranges. The NCV8711 is CMOS LDO regulator designed for up to 18 V input voltage and 100 mA output current. Quiescent current of only 1  $\mu$ A makes this device ideal solution for battery– powered, always–on systems. Several fixed output voltage versions are available as well as the adjustable version.

The device (version B) implements power good circuit (PG) which indicates that output voltage is in regulation. This signal could be used for power sequencing or as a microcontroller reset.

Internal short circuit and over temperature protections saves the device against overload conditions.

### Features

- Operating Input Voltage Range: 2.7 V to 18 V
- Output Voltage: 1.2 V to 17 V
- Capable of Sourcing 140 mA Peak Output Current
- Very Low Quiescent Current: 1  $\mu$ A typ.
- Low Dropout: 215 mV typ. at 100 mA
- Output Voltage Accuracy  $\pm 1\%$
- Power Good Output (Version B)
- Stable with Small 1  $\mu$ F Ceramic Capacitors
- Built–in Soft Start Circuit to Suppress Inrush Current
- Over–Current and Thermal Shutdown Protections
- Available in Small TSOP–5 and WDFNW6 (2x2) Packages
- These Devices are Pb–Free and are RoHS Compliant

### Typical Applications

- Body Control Modules
- LED Lighting
- On Board Charger
- General Purpose Automotive

### PIN DESCRIPTION

Pin No. TSOP-5	Pin No. WDFNW6	Pin Name	Description
1	6	IN	Power supply input pin.
2	3	GND	Ground pin.
5	1	OUT	LDO output pin.
3	4	EN	Enable input pin (high – enabled, low – disabled). If this pin is connected to IN pin or if it is left unconnected (pull-up resistor is not required) the device is enabled.
4 (Note 1)	2	ADJ	Adjust input pin. Connect it to the output resistor divider or directly to the OUT pin.
4 (Note 1)	5	PG	Power good output pin. Could be left unconnected or could be connected to GND if not needed. High level for power ok, low level for fail.
4 (Note 1)	2, 5	NC	Not internally connected. This pin can be tied to the ground plane to improve thermal dissipation.
NA	EP	EPAD	Connect the exposed pad to GND.

1. Pin function depends on device version.

**MAXIMUM RATINGS**

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

5. Effective capacitance, including the effect of DC bias, tolerance and temperature. See the Application Information section for more information.
6. Performance guaranteed over the indicated operating temperature range by design and/or characterization. Production tested at  $T_A = 25^\circ\text{C}$ . Low duty cycle pulse techniques are used during the testing to maintain the junction temperature as close to ambient as possible.
7. Dropout measured when the output voltage falls 100 mV below the nominal output voltage. Limits are valid for all voltage versions.
8. Startup time is the time from EN assertion to point when output voltage is equal to 95% of  $V_{OUT-NOM}$ .
9. Applicable only to version B (device option with power good output). PG threshold and PG hysteresis are expressed in percentage of nominal output voltage.
10. Shutdown current includes EN Internal Pull-up Current.
