

TS5A3359

SCDS214D - OCTOBER 2005 - REVISED MAY 2015

## TS5A3359 1-Ω SP3T Bidirectional Analog Switch 5-V/3.3-V Single-Channel 3:1 Multiplexer and Demultiplexer

#### **Features**

- Isolation in Power-Down Mode,  $V_{CC} = 0$
- Specified Break-Before-Make Switching
- Low ON-State Resistance (1  $\Omega$ )
- Control Inputs Are 5.5-V Tolerant
- Low Charge Injection (5 pC  $V_{CC} = 1.8 \text{ V}$ )
- **Excellent ON-State Resistance Matching**
- Low Total Harmonic Distortion (THD)
- 1.65-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

#### 2 Applications

- Cell Phones
- **PDAs**
- Portable Instrumentation
- Audio and Video Signal Routing
- Low-Voltage Data Acquisition Systems
- Communication Circuits
- Modems
- Hard Drives
- Computer Peripherals
- Wireless Terminals and Peripherals

#### 3 Description

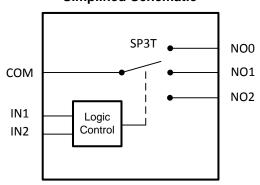

The TS5A3359 device is a bidirectional, single channel, single-pole triple-throw (SP3T) analog switch that is designed to operate from 1.65 V to 5.5 V. This device provides a signal switching solution while maintaining excellent signal integrity, which makes the TS5A3359 suitable for a wide range of applications in various markets including personal electronics, test and measurement equipment, and portable instrumentation. The device maintains the signal integrity by its low ON-state resistance, excellent ON-state resistance matching, and total harmonic distortion (THD) performance. To prevent signal distortion during the transferring of a signal from one channel to another, the TS5A3359 device also has a specified break-before-make feature. The device consumes very low power and provides isolation when  $V_{CC} = 0$ .

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS5A33591	US8 (8)	2.30 mm × 2.00 mm
133A33391	DSBGA (8)	0.00 mm × 0.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

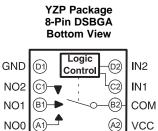

#### Changes from Revision C (June 2008) to Revision D

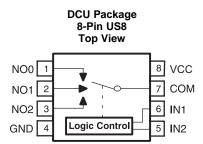

**Page** 

Changed YZP pinout numbering.

## 5 Pin Configuration and Functions

#### **Pin Functions**

	PIN		1/0	DESCRIPTION
NAME	DCU	YZP	1/0	DESCRIPTION
NO0	1	A1	I/O	Normally open
NO1	2	B1	I/O	Normally open
NO2	3	C1	I/O	Normally open
GND	4	D1	_	Ground
IN2	5	D2	I	Digital control to connect COM to NO
IN1	6	C2	I	Digital control to connect COM to NO
COM	7	B2	I/O	Common
VCC	8	A2	_	Power supply

## 6 Specifications

#### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)(2)

			MIN	MAX	UNIT
$V_{CC}$	Supply voltage <sup>(3)</sup>		-0.5	6.5	V
$V_{NO} \ V_{COM}$	Analog voltage <sup>(3)</sup> (4) (5)		-0.5	V <sub>CC</sub> + 0.5	V
I <sub>K</sub>	Analog port diode current	$V_{NO}, V_{COM} < 0$	-50		mA
I <sub>NO</sub>	Com On-state switch current $V_{NO}$ , $V_{COM} = 0$ to $V_{CC}$	Vivo Voor = 0 to Voo	-200	200	mA
I <sub>COM</sub>		-400	400	IIIA	
$V_{I}$	Digital input voltage (3) (4)		-0.5	6.5	V
I <sub>IK</sub>	Digital input clamp current	V <sub>I</sub> < 0	-50		mA
I <sub>CC</sub>	Continuous current through V <sub>CC</sub>	,		100	mA
I <sub>GND</sub>	Continuous current through GND		-100	100	mA
T <sub>stg</sub>	Storage temperature		-65	150	°C

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum

(3) All voltages are with respect to ground, unless otherwise specified.

(4) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(5) This value is limited to 5.5-V maximum.

#### 6.2 ESD Ratings

			VALUE	UNIT
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins (1)	±2000	
V <sub>(ESD)</sub>	Electrostatic discharge	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins (2)	±1000	V

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

#### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>CC</sub>		1.65	5.5	V
$V_{NO} \ V_{COM}$	Analog voltage	0	V <sub>CC</sub>	V
VI	Digital input voltage	0	$V_{CC}$	V

#### 6.4 Thermal Information

		TS5A3359			
	THERMAL METRIC <sup>(1)</sup>	DCU (US8)	YZP (DSBGA)	UNIT	
		8 PINS	8 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	204.2	105.8	°C/W	
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	76.2	1.6	°C/W	
$R_{\theta JB}$	Junction-to-board thermal resistance	82.9	10.8	°C/W	
$\Psi_{JT}$	Junction-to-top characterization parameter	7.6	3.1	°C/W	
$\psi_{JB}$	Junction-to-board characterization parameter	82.5	10.8	°C/W	

For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report, SPRA953.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 6.5 Electrical Characteristics for 5-V Supply

 $V_{CC}$  = 4.5 V to 5.5 V,  $T_A$  = -40°C to 85°C (unless otherwise noted)<sup>(1)</sup>

#### **Table 1. Parameter Description**

SYMBOL	DESCRIPTION
V <sub>COM</sub>	Voltage at COM
V <sub>NO</sub>	Voltage at NO
r <sub>on</sub>	Resistance between COM and NC or COM and NO ports when the channel is ON
r <sub>peak</sub>	Peak ON-state resistance over a specified voltage range
$\Delta r_{on}$	Difference of r <sub>on</sub> between channels in a specific device
r <sub>on(flat)</sub>	Difference between the maximum and minimum value of ron in a channel over the specified range of conditions
I <sub>NO(OFF)</sub>	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state
I <sub>NO(PWROFF)</sub>	Leakage current measured at the NO port during the power-down condition, $V_{CC} = 0$ .
I <sub>NO(ON)</sub>	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) open
I <sub>COM(ON)</sub>	Leakage current measured at the COM port, with the corresponding channel (COM to NO or COM to NC) in the ON state and the output (NC or NO) open
I <sub>COM(OFF)</sub>	Leakage current measured at the COM port during the power-down condition, $V_{CC} = 0$
I <sub>COM(PWROFF)</sub>	Leakage current measured at the COM port during the power-down condition, $V_{CC} = 0$ .
V <sub>IH</sub>	Minimum input voltage for logic high for the control input (IN)
V <sub>IL</sub>	Maximum input voltage for logic low for the control input (IN)
VI	Voltage at the control input (IN)
$I_{IH}$ , $I_{IL}$	Leakage current measured at the control input (IN)
t <sub>ON</sub>	Turnon time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning ON.
t <sub>OFF</sub>	Turnoff time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog output (COM or NO) signal when the switch is turning OFF.
t <sub>BBM</sub>	Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels (NC and NO) when the control signal changes state.
Q <sub>C</sub>	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NO or COM) output. This is measured in coulomb (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_{COM}$ , $C_L$ is the load capacitance and $\Delta V_{COM}$ is the change in analog output voltage.
C <sub>NO(OFF)</sub>	Capacitance at the NO port when the corresponding channel (NO to COM) is OFF
C <sub>NO(ON)</sub>	Capacitance at the NO port when the corresponding channel (NO to COM) is ON
C <sub>COM(ON)</sub>	Capacitance at the COM port when the corresponding channel (COM to NO) is ON
C <sub>COM(OFF)</sub>	Capacitance at the COM port when the corresponding channel (COM to NO) is OFF
C <sub>I</sub>	Capacitance of control input (IN)
O <sub>ISO</sub>	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM or NO to COM) in the OFF state.
X <sub>TALK</sub>	Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured in a specific frequency and in dB.
BW	Bandwidth of the switch. This is the frequency in which the gain of an ON channel is -3 dB less than the DC gain.
THD	Total harmonic distortion describes the signal distortion caused by the analog switch. This is defined as the ratio of root mean square (RMS) value of the second, third, and higher harmonic to the absolute magnitude of the fundamental harmonic.
I <sub>CC</sub>	Static power-supply current with the control (IN) pin at V <sub>CC</sub> or GND

Table 2. Summary of Characteristics<sup>(1)</sup>

PARAMETER	CHARACTERISTIC
Configuration	Triple 3:1 Multiplexer/ Demultiplexer (1 x SP3T)
Number of channels	1
ON-state resistance (r <sub>on</sub> )	1.1 Ω
ON-state resistance match (Δr <sub>on</sub> )	0.1 Ω
ON-state resistance flatness (r <sub>on(flat)</sub> )	0.15 Ω
Turnon/turnoff time (t <sub>ON</sub> /t <sub>OFF</sub> )	40 ns/35 ns
Break-before-make time (t <sub>BBM</sub> )	1 ns
Charge injection (Q <sub>C</sub> )	40 pC
Bandwidth (BW)	100 MHz
OFF isolation (O <sub>ISO</sub> )	-65 dB at 10 MHz
Crosstalk (X <sub>TALK</sub> )	-66 dB at 10 MHz
Total harmonic distortion (THD)	0.01%
Leakage current (I <sub>COM(OFF)</sub> /I <sub>NO(OFF)</sub> )	±20 μA
Power supply current (I <sub>CC</sub> )	0.1 μΑ
Package options	8-pin DCU or YZP

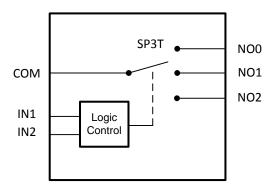

(1)  $V_{CC} = 5 \text{ V}, T_A = 25^{\circ}\text{C}$ 

## 8 Detailed Description

#### 8.1 Overview

The TS5A3359 is a bidirectional, single-channel, single-pole triple-throw (SP3T) analog switch that is designed to operate from 1.65 V to 5.5 V. This device provides a signal switching solution while maintaining excellent signal integrity, which makes the TS5A3359 suitable for a wide range of applications in various markets including personal electronics, portable instrumentation, and test and measurement equipment. The device maintains the signal integrity by its low ON-state resistance, excellent ON-state resistance matching, and total harmonic distortion (THD) performance. To prevent signal distortion during the transferring of a signal from one channel to another, the TS5A3359 device also has a specified break-before-make feature. The device consumes very low power and provides isolation when  $V_{CC} = 0$ .

#### 8.2 Functional Block Diagram

#### 8.3 Feature Description

Isolation in Power-Down Mode,  $V_{CC} = 0$ 

When power is not supplied to the VCC pin,  $V_{CC}=0$ , the signal paths NO and COM are high impedance. This is specificed in the electrical characterisitics table under the COM and NO OFF leakage current when  $V_{CC}=0$ . Because the device is high impedance when it is not powered, you may connect other signals to the signal chain without interference of the TS5A3359.

#### 8.4 Device Functional Modes

**Table 3. Function Table** 

IN2	IN1	COM TO NO, NO TO COM				
L	L	OFF				
L	Н	COM = NO0				
Н	L	COM = NO1				
Н	Н	COM = NO2				

#### 9 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

#### 9.1 Application Information

The TS5A3359 switch is bidirectional, so the NO and COM pins can be used as either inputs or outputs. This switch is typically used when there is only one signal path that needs to be able to communicate to 3 different signal paths.

#### 9.2 Typical Application

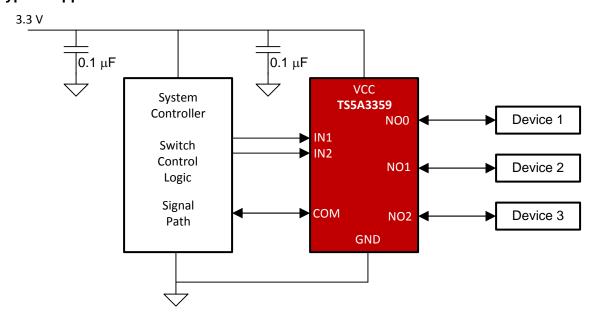

Figure 29. Typical Application Schematic

#### 9.2.1 Design Requirements

The TS5A3359 device can be properly operated without any external components. However, TI recommends connecting unused pins to ground through a  $50-\Omega$  resistor to prevent signal reflections back into the device. TI also recommends pulling up the digital control pins (IN1 and IN2) to VCC or pulling down to GND to avoid undesired switch positions that could result from the floating pin.

Select the appropriate supply voltage to cover the entire voltage swing of the signal passing through the switch because the TS5A3359 input and output signal swing through NO and COM are dependent on the supply voltage  $V_{CC}$ . For example, if the desired signal level to pass through the switch is 5 V,  $V_{CC}$  must be greater than or equal to 5 V.  $V_{CC}$  = 3.3 V would not be valid for passing a 5-V signal since the Analog signal voltage cannot exceed the supply.

#### 9.2.2 Detailed Design Procedure

The TS5A3359 device can be properly operated without any external components. However, TI recommends connecting unused pins to ground through a  $50-\Omega$  resistor to prevent signal reflections back into the device. TI also recommends pulling up the digital control pins (IN1 and IN2) to VCC or pulling down to GND to avoid undesired switch positions that could result from the floating pin.

## **Typical Application (continued)**

Select the appropriate supply voltage to cover the entire voltage swing of the signal passing through the switch because the TS5A3359 input/output signal swing through NO and COM are dependant of the supply voltage  $V_{\rm CC}$ .

#### 9.2.3 Application Curve

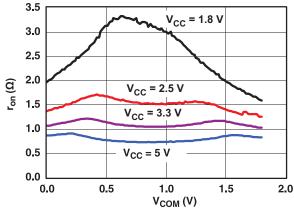

Figure 30.  $R_{on}$  vs  $V_{COM}$ 

Submit Documentation Feedback

## 10 Power Supply Recommendations

TI recommends proper power-supply sequencing for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the device. Always sequence VCC on first, followed by NO or COM.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the VCC supply to other components. A  $0.1-\mu F$  capacitor, connected from VCC to GND, is adequate for most applications.

#### 11 Layout

#### 11.1 Layout Guidelines

TI recommends following common printed-circuit board layout guidelines to ensure reliability of the device.

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.

#### 11.2 Layout Example

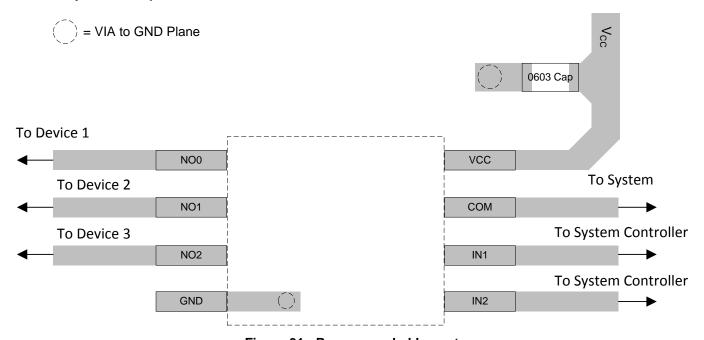

Figure 31. Recommended Layout

#### 12 Device and Documentation Support

#### 12.1 Community Resource

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use

TI E2E™ Online Community TI's Engineer-to-Engineer (E2E) Community. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free** (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

## PACKAGE OPTION ADDENDUM

17-Aug-2015

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

#### IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
